

## Planar Bone Scintigraphy

Species:	Canine	Breed:	Mixed Breed
Age:	6 years	Sex:	M/C
Isotope:	$^{99m}\text{Tc}$	Chemical Form:	MDP

**Interpretation: Most consistent with a soft tissue (ligament +/- meniscus) injury of the right stifle joint. Increased radionuclide uptake suggestive of osteoarthritis of the tarsal-metatarsal joint of the 3rd digit of the left rear foot was also noted.**
